

Dana-

It's okay to share it with others. But please advise them that this study was not completed and the analysis was just a "first attempt" to bring together dive activity and contaminant information for a health assessment for the divers.

Joan

Re: Diving in Portland Harbor

Dana-

Attached is a word file containing a description and a summary of the dive and contaminant data for the divers and an excel file with a rough estimate for calculating exposure and dose using the diver log and sediment concentrations. The study was not completed (due to lack of funding, other) but I think some of this data could be useful for the risk assessment and directing attention to occupational exposures of divers in contaminated waters.

If you need more information, just call.

Thanks-Joan
